

REQUEST FOR PROPOSAL

B2B University Aggregator & Admission Management System

Project Presentation for Software Development Partners

Presented by: RIMIT Education & SPES Education

1. Executive Summary & Objective

Goal: To build a dual-purpose enterprise application consisting of a National University Aggregator and a B2B Sub-Center Partner Portal.

- **Current Challenge:** Operational data, fee structures, and prospectuses are fragmented across various university channels, causing delays for our regional partners.
- **The Solution:** A centralized cloud platform uniting all universities under one digital umbrella.
- **Empowering Partners:** Nationwide sub-centers will have an autonomous dashboard to register students, upload documents, and manage finances directly.

2. Module 1: Centralized University Aggregator

A unified hub mapping multiple Indian Universities (Online/ODL streams). Administered centrally by RIMIT Management.

- **University Directory:** A visual grid interface showcasing all partner university profiles and key highlights.
- **Advanced Search Engine:** Exhaustive database allowing users to filter courses by stream, duration, eligibility, and dynamic fee structures.
- **Digital Document Vault:** Centralized repository granting instant viewing and downloading of prospectuses, syllabi, and official notification PDFs.

3. Module 2: B2B Sub-Center Dashboard

- **Dashboard & Escalations:** Real-time sub-center stats, 3-level escalation matrix, and mapped University SPOCs.
- **Universal Lead Generator:** Comprehensive data entry form for student inquiries (Name, Course, State, District).
- **Document Management:** Secure upload facility for ID proofs, mark lists, and experience certificates.
- **Accounts & Ledgers:** Real-time center ledger balances, invoice generation, and bulk receipt downloads.
- **Marketing Tools:** Pre-approved landing pages, psychometric tests, and downloadable brochures.
- **Support Ticketing:** Built-in helpdesk for operational queries directly to central admin.

4. System Logic & Integrations

- **Session Enforcement Rules:** Programmatic validation blocking non-eligible applications (e.g., preventing fresh candidates in specific intake cycles like July, routing them to October).
- **Multi-Tier Access Roles:** Granular permissions separating Super Admin, Academic Head, Finance, Counselors, and Sub-Centers.
- **Lead Ingestion API:** Direct hooks capturing inbound inquiries from Meta (Facebook/Instagram) advertising pipelines.
- **Omnichannel Alerts:** Automated triggers mapped to WhatsApp Business API and SMTP for instant application status updates.

5. Technical Architecture Requirements

Category	Required Standard
Platform Model	Cloud-native web app; mobile-responsive UI (Desktop/Tablet/Mobile).
Search Engine	High-speed indexing (e.g., Elasticsearch) for heavy document filtering.
Cloud Storage	Secure object storage (e.g., AWS S3) optimized for bulk PDF downloads and high-res image uploads.
Security protocols	Multi-Factor Authentication (OTP) for sub-centers; SSL/TLS encryption.

6. Project Timeline & Milestones

Phase	Deliverables
1. Discovery	UI/UX wireframes, architecture blueprint, and database schema.
2. Alpha Release	University Aggregator database live; Super-Admin CMS operational.
3. Beta Release	Sub-center portal launch (Leads, Documents, Accounts modules).
4. UAT & Testing	Role verification, stress testing, and workflow evaluation.
5. Deployment	Production launch and technical training for partner networks.

7. Vendor Evaluation Criteria

Vendors must submit proposals including: Corporate Overview, Tech Stack Blueprint, Relevant Case Studies, and an Itemized Commercial Breakdown.

Evaluation Dimension	Weight
Technical Approach & Database Architecture	30%
B2B Portal UI Execution & Document Security	25%
Commercial Value & Scalability	20%
Quality of Portfolio & Case Studies	15%
SLA & Post-launch Maintenance capabilities	10%
