

REQUEST FOR PROPOSAL (RFP)

Comprehensive B2B University Aggregator & Centralized Admission Management System

Organization	RIMIT Education & SPES Education (Managed by RIMIT Educational Charitable Trust)
Point of Contact	Abdul Bari Chengana, Managing Director
Primary Locations	Kerala, India (Core hubs in Kochi & Malappuram)
Date of Issuance	July 1, 2026
Submission Deadline	[Insert Submission Deadline Date]

1. Executive Summary

RIMIT Education, operating in conjunction with SPES Education under the RIMIT Educational Charitable Trust, is inviting proposals from established software development agencies to build a robust, scalable, cloud-based Business-to-Business (B2B) Educational Portal and Centralized Admission Management System.

The objective of this project is twofold. First, it will serve as a national **University Aggregator**, bringing diverse universities across India under a single digital umbrella where information regarding courses, dynamic fee structures, eligibility criteria, and digital prospectuses is systematically structured. Second, it will function as an operational **B2B Portal** empowering our vast network of sub-centers and partner institutions nationwide to directly register students, manage demographic and academic profiles, and securely upload required admission documents.

2. Company Background & Operational Context

RIMIT Education is a premier educational consultancy and distance education administration organization based in Kerala. Our critical roles include acting as the National Coordinator for Kerala for Mangalayatan University (Online/ODL streams) and serving as the Regional Center Coordinator in Kerala for the Board of Open Schooling and Skill Education (BOSSE).

Our daily operations involve managing extensive student recruitment pipelines across decentralized sub-centers. Currently, partner institutions suffer from fragmented data spread across disjointed university channels. This platform will unify these offerings, optimizing administrative productivity and accuracy.

3. Comprehensive Project Scope & Functional Modules

The selected vendor will deliver an end-to-end cloud platform encompassing the following core architectural modules:

Module 1: Centralized University Aggregator Hub

- **Unified University Directory:** Comprehensive profiles for all partner universities across India, managed dynamically via a central administrative panel.
- **Course & Fee Repository:** Exhaustive listing of courses (Undergraduate, Postgraduate, Diploma, Open Schooling) searchable by stream, eligibility, duration, and structured fees.
- **Prospectus & Document Library:** A centralized digital vault allowing instant access, viewing, and downloading of university prospectuses, academic calendars, syllabi, and official notification PDFs.

Module 2: B2B Sub-Center Partner & Admission Portal

Critical Operational Requirement: Sub-centers must be equipped with an intuitive interface to handle student enrollments autonomously while adhering to rigid validation protocols set by the central management.

- **Direct Student Registration:** Authorized sub-centers can log in securely to input candidate details including full demographic profiles, contact data, and chosen academic pathways.
- **Document Upload Vault:** Seamless drag-and-drop mechanism for sub-centers to upload high-resolution applicant documentation (Identity Proofs, Marklists, Migration Certificates, and Experience Certificates).
- **Real-time Status Tracking:** B2B partners can monitor the exact position of their candidates within the multi-stage admission workflow (e.g., Applied, Document Verified, Fee Paid, Enrollment Generated).

Module 3: Advanced Business Logic & Intake Controls

- **Session Enforcement Matrix:** Programmatic validation rules mapping specific student eligibility to distinct intake cycles. For example, the software must programmatically enforce constraints preventing fresh candidates from enrolling in restricted sessions (e.g., the July session), automatically routing them to subsequent valid terms (e.g., October session).
- **Multi-tier Access Hierarchy:** Granular access configuration mapping directly to specific organizational roles:
 - *Super Admin (MD):* Complete operational, financial, and architectural control.
 - *Academic Head / Managers:* Holistic pipeline supervision and macro-analytical reporting.
 - *Academic Counselors / Admission Officers:* Localized view limited to directly assigned leads or sub-center allocations.
 - *Finance / Accounts Officers:* Financial modules including ledger tracking, fee confirmations, and receipt issuance.

Module 4: Marketing & Communication Integrations

- **Lead Ingestion Engine:** Automated hooks capturing inbound leads from Meta advertising infrastructures (Facebook & Instagram Lead Generation architectures) straight into the core CRM.
- **Omnichannel Notifications:** Direct integration with the WhatsApp Business API and SMTP gateways to broadcast instant automated notifications to students and sub-centers upon key workflow updates.

4. Technical Requirements & Architecture Standards

Category	Technical Specification Requirement
Deployment Model	Cloud-native web application, mobile-responsive design optimizing layouts across Desktop, Tablet, and Mobile devices.
Search Infrastructure	Enterprise-grade high-speed search indexing engine (e.g., Elasticsearch) allowing multi-attribute filtering (State, University, Budget, Stream, Mode).
Storage & Document Vault	Secure cloud storage (e.g., AWS S3 with encryption at rest) optimized for high-volume PDF prospectus downloads and student document uploads.
Security Protocols	Multi-Factor Authentication (MFA / OTP via SMS/WhatsApp) for B2B sub-center logins, SSL/TLS data encryption in transit, and continuous automated fallback backups.
API Capabilities	Extensible RESTful API architecture enabling hassle-free connections with payment gateways, external university webhooks, and lead-generation tools.

5. Expected Project Timeline & Key Milestones

Project Phase	Core Deliverables & Expectations	Estimated Deadline
Phase 1: Discovery	UI/UX wireframes, full system architecture design, and final database schema mapping.	[Vendor to Propose]
Phase 2: Alpha Version	Centralized University Aggregator Hub database live; Admin CMS interface operational.	[Vendor to Propose]
Phase 3: Beta Version	B2B Sub-center portal launch with candidate data entry modules and secure document upload vault.	[Vendor to Propose]
Phase 4: Testing & UAT	Rigorous stress testing, role-permission verification, and end-to-end workflow evaluation by RIMIT staff.	[Vendor to Propose]
Phase 5: Deployment	Production environment launch, active database migration, and sub-center training workshops.	[Vendor to Propose]

6. Vendor Proposal Submission Requirements

Responding agencies must structure their submissions cleanly, providing detailed insight into the following items:

- Corporate Overview:** Executive summary of corporate history, engineering team size, location of development centers, and core areas of specialization.
- Technical Blueprint:** Explicit definition of the proposed tech stack (Backend, Frontend, Databases, Cloud Infrastructure) detailing how high-concurrency document searches and secure asset streaming will be managed.
- Relevant Case Studies:** Documentation of at least two enterprise-scale projects of comparable complexity (e.g., B2B aggregator portals, multi-tier CRM systems, or heavy educational management ERPs).
- Commercial Breakdown:** Itemized costing covering UI/UX phase, development cycles, cloud setup, API integration expenses, and ongoing annual maintenance contracts (AMC).
- Implementation Schedule:** Comprehensive timeline chart detailing development sprints and deployment strategy.

7. Evaluation Criteria

Evaluation Dimension	Assigned Weight
Technical Approach & Database Design for Aggregator Platform	30%
B2B Portal Execution Strategy & Secure Document Management	25%
Commercial Proposal, Cost Competitiveness & Scalability Value	20%
Proven Experience & Quality of Portfolio Case Studies	15%
Post-launch Service Level Agreement (SLA) & Training Capabilities	10%

8. Submission Guidelines

- **Document Format:** Proposals must be submitted strictly in electronic PDF format.
- **Clarifications & Q&A:** Technical or business logic questions concerning this RFP can be forwarded to the point of contact prior to the Q&A deadline.
- **Delivery Address:** Submissions should be securely transmitted via email to the corporate address with the explicit subject line: **"RIMIT Education - Enterprise B2B Aggregator System Proposal - [Vendor Name]"**.
